One for all

clever float

Yes - it's true: With this innovative fishing equipment, you can target any type of fish. From baitfish to a fully grown monster.

- ✓ Fish without lead or additional weights
- ✓ Great casting distance ... even with small bait weights
- ✓ Bite resistance can be adjusted after casting by gentle tapping
- ✓ Float & Dive function (also suitable for bottom fishing)
- ✓ Available in 3 daylight colors: Yellow, Orange, Red
- ✓ Day and night float with a secure glowstick attachment
- ✓ Made from environmentally friendly PLA material
- ✓ Developed and manufactured in Germany

„I'm Sabine, ambassador for Clever Float.“

The CF mounting

clever float

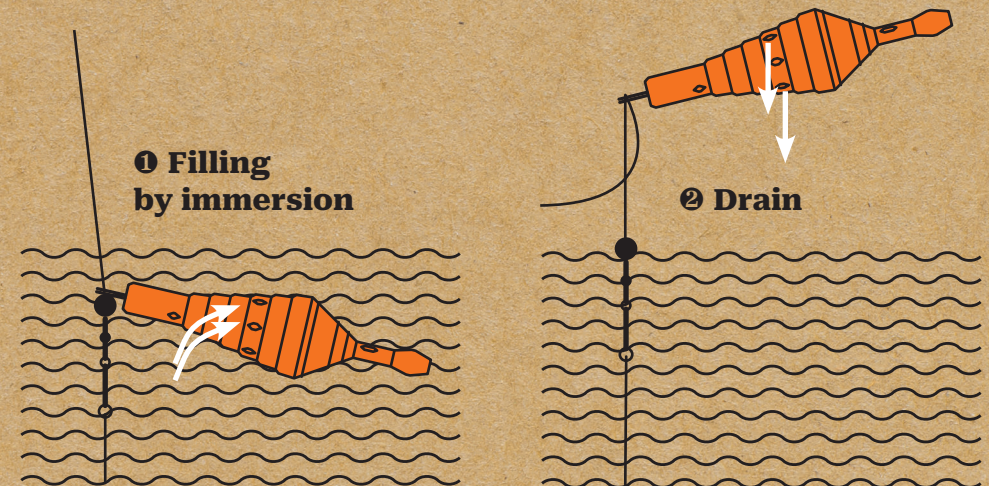

The basic setup

The Clever Float must always be set to the desired basic configuration before casting (**never cast it dry**). The basic setup is done in two steps:

- ❶ Filling by immersion
- ❷ Pouring out to the desired water fill level (casting weight)

Two things should be considered:

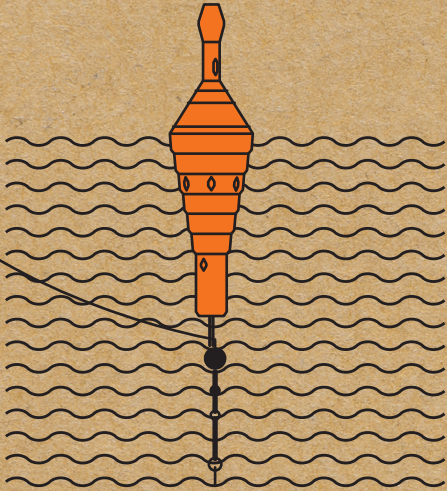

- Casting weight based on the action weight of the fishing rod and the intended casting distance
- Pre-adjustment of sensitivity based on the bait weight and water fill level

- ⚠ Beware of overfilling: If there is too much water weight, the Clever Float sinks to the bottom

clever float

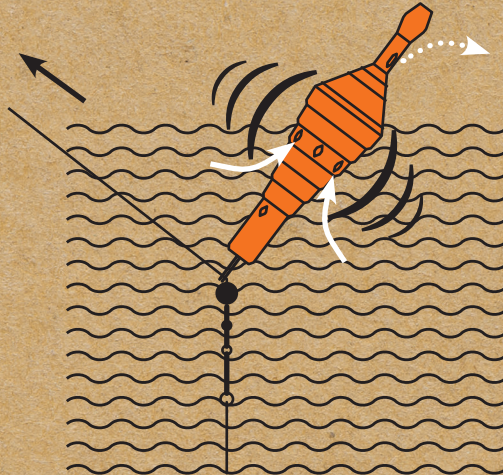

And that's how it works!

The Clever Float always self-aligns vertically after casting.

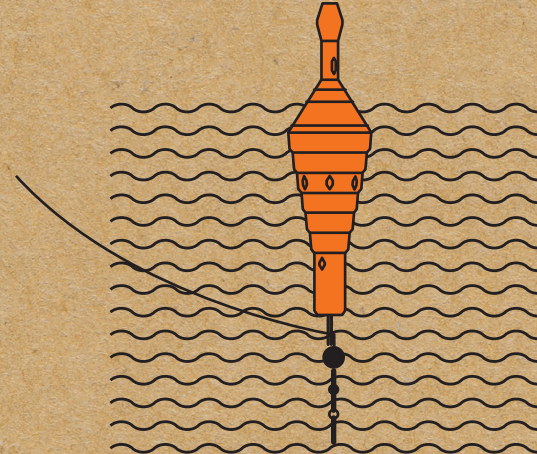

It automatically levels itself to the pre-defined construction level.

Water can press in as needed through the inlet slots.

By tapping the fishing line briefly, the Clever Float tilts. Water enters through the inlet openings while air escapes through the upper openings at the neck.

This reduces the buoyancy and consequently decreases the sensitivity to bites.

The sensitivity has been adjusted, and the bite resistance reduced.

By repeatedly tapping, the bite resistance can be further reduced to the desired optimum level.

The tip of the float is now barely above the water.

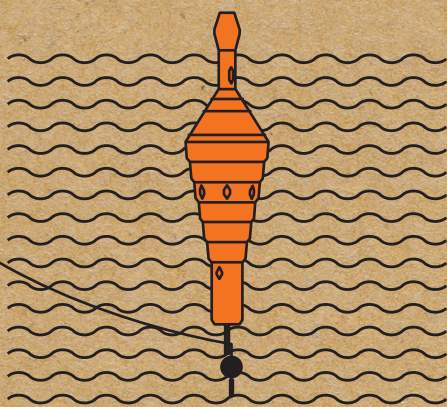

Adjust the sensitivity

A glowstick (chemlight) can be permanently attached to extend the silhouette of the float, increasing visibility.

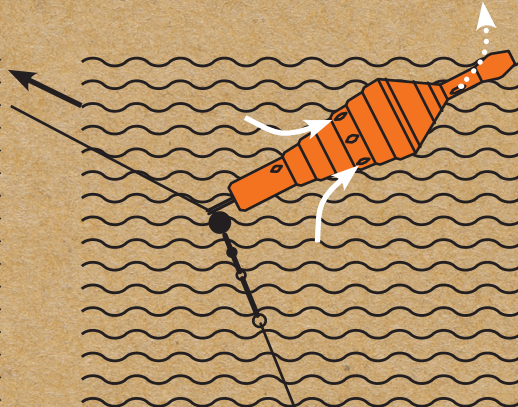

Please observe the safety instructions for glowsticks.

Only the Clever Floats can do this.

The Clever Floats do not float in the water - they suspend themselves using compressed air. By adjusting them (as described on the previous page), more water enters the interior, and additional air can escape.

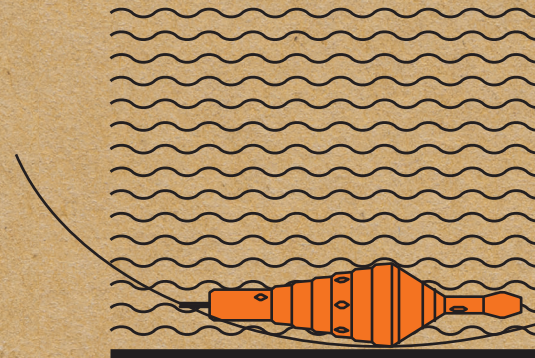

The Clever Floats then rest deeper in the water.

With a short, vigorous pull, the Clever Float completely submerges. Due to its angled position, more water enters through the inlet openings, and the remaining air escapes.

If necessary, the abrupt pulling motion may need to be repeated several times until the buoyancy threshold is exceeded.

**For bottom fishing,
the Mini Float should be used.**

The Clever Float sinks to the bottom.

This approach allows for precise placement of the Clever Floats to the desired spot. It may be necessary if the casting was not successful enough or if there is an obstacle (e.g., water lilies) in front of the desired spot.

For those who want the Clever Float to sink to the bottom right after casting, it can be filled completely with water beforehand.

Float and Dive

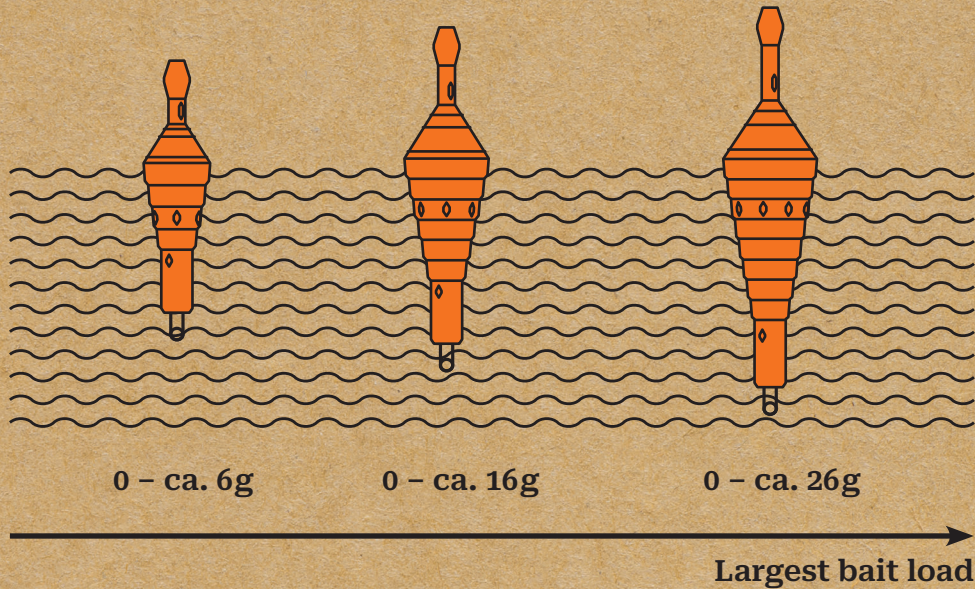

3 sizes in 3 colors can be chosen freely

mini
float

uni
float

maxi
float

Greatest ejection distance

It flies like a dart arrow:

For truly long-range casting of up to 50 meters,
the Mini Float is best suited.

Care instructions

Our entire range of Clever Float products represents the latest advancements in fishing gear, manufactured using 3D printing technology.

To support environmental sustainability, we use a material called PLA* (Polylactic Acid), derived from corn starch and lactic acid bacteria. **As a result, Clever Float products are completely free from petroleum-based resources.**

However, there are some minor limitations that do not significantly affect normal fishing operations: Clever Floats should not be exposed to permanent temperatures exceeding 50°C outside of the water. Prolonged exposure to UV light over several days should also be avoided.

After completing your fishing session, shake out the remaining water from the Clever Float through the lower openings at the thickened end. If heavily soiled, rinse thoroughly with clean water.

Tight lines and happy fishing!

The fishing equipment of the CF series is exclusively intended for hobby and recreational fishing purposes and must not be used for any other applications.

*PLA = Polylactide (Biocompatible Material)
